The Hiring Manager for Chemical Engineering Graduate Programme,
ExxonMobil,
Fawley, Southampton SO45 1TX
United Kingdom

Dear Sir or Madam

Sub: Application to Chemical Engineering Graduate Programme with ExxonMobil at Fawley, UK

As detailed in my attached CV, my professional career and training so far has had a singular focus on application of chemical engineering technologies to the energy industry, which happens to be the core activity of ExxonMobil. As a matter of fact, I do not recall ever wanting to do something else with my life, besides work towards solving the world's energy problems. As the world's largest publicly traded energy company, I would hope to be offered significantly more challenging and rewarding assignments with ExxonMobil as compared to any other chemical engineering company.

My industrial placements include experience across operations, design, and research sectors of the chemical engineering industry, providing excellent background for both Development and Contact Engineer job profiles. That said, my preference would be to start with the Development Engineering team considering my tendency to structure my work in terms of projects along with my project management qualifications. Also, since my primary aim is to work on cutting-edge energy projects around the world, I am, and shall remain, geographically mobile for the right opportunity.

I'm also fully committed to giving back to the community and making the world a better place through engineering - reflected through my voluntary work as the secretary of the IChemE's Scottish Members Group and through my tutoring and demonstration jobs with Chemical Engineering undergraduates at the university. I hope to continue my work as an ambassador for Chemical Engineering and other STEM fields alongside ExxonMobil.

With safety and integrity being at the core of my personal value system, I'm confident of proving myself a significant asset in ExxonMobil's mission to provide affordable energy to the global market in a safe, efficient, and responsible way.

I look forward to hearing from ExxonMobil, once you've had the opportunity to look at my application; please do not hesitate to contact me for further details, work samples, or references should you need it during the hiring process.

Many thanks

Karthik
